

Alex Bakalian is a Manager for the Water Practice in the World Bank covering operations in West and Central Africa. He has extensive experience in the water and environmental services areas. He is well recognized for his leadership role in the sector and his wide-ranging knowledge of operational and policy work. Alex is a civil engineer (with a degree from American University of Beirut) and has a PhD in Environmental Health Engineering (Johns Hopkins University). Alex has also completed a Master in Business Administration from the George Washington University.

Alex has been in the World Bank for over 25 years, having worked early on in the Water and Sanitation Program, and then in various positions in the Latin American and Caribbean, the Middle East and North Africa and Africa Regions. He has prepared and supervised a large number of investment operations in some 20 countries, including rural and urban water supply and sanitation, water resources projects and services for low-income settlements. He is also well known in the Bank for leading a number of sector and policy studies. Prior to joining the Bank, Alex has worked for a contracting and engineering firm in the Middle East.
